

SHC PROTEINS AS THERAPEUTIC TARGETS IN PROLIFERATIVE DISEASES

5 Abstract of the Disclosure

This invention provides methods for treating a subject afflicted with a proliferative disorder comprising administering to the subject a therapeutically  
10 effective amount of an agent which inhibits the expression of p46 Shc and/or p52 Shc, inhibits the activity of p46 Shc and/or p52 Shc in the subject, or increases the level of phosphorylated p66 Shc in the subject. This invention also provides methods for  
15 determining whether an agent inhibits the phosphorylation of p46 Shc or p52 Shc; inhibits the dephosphorylation of p66 Shc comprising; or an agent inhibits the binding of a Shc A protein with a protein to which the Shc A protein must bind in a cell in order  
20 to carry out its proliferative function. This invention also provides articles of manufacture for use in treating a proliferative disorder in a subject.
